

ABSTRACT

5 The invention relates to a thong-type item of clothing
comprising at least two independent parts, namely a rear part
(1) and a front part (2) which are provided with complementary
coupling means (11, 21) such that they can be fixed in a use
position and subsequently separated. The front part (2) is
essentially T-shaped and the coupling means (21) thereof are
arranged at the ends of the wings. The rear part (1) can have
different configurations and the coupling means (11) thereof
10 are arranged at the sides or at the upper and lower ends of
same.
